For this high fidelity mockup many screens were changed. In the beginning, we did not have high fidelity tools to represent the technology available to us. We focused on user work flow in the low fidelity mockup. Here, we took the user work flows and created a technologically sound solutions. This includes formatting of the website such as font type, font size, headers, buttons, and pop-up screens. We created these high fidelity mockups in Adobe XD. This program allowed us to create a prototype where users can interact with our mockup. For the user testing, we ran the Adobe XD prototype on a desktop computer and recorded our users' comments while they poked around in the application. This use of technology in our final high fidelity mockup allowed us not only to gauge the design elements in the website, but also to see how users reacted to the different buttons. This will allow us to further tune in the user experience on our website by making adjustments to the User Interface. Also, in the high fidelity mockup we realized that our previous low fidelity mockups were too crowded. One major component that we changed in the high fidelity prototype was leaving out the admin dashboard. However, we included a new my events page that clearly shows the user their current, and previous events. Then, it would allow them the make modification, delete, review, report, and open disputes with the given host/performer of the event. One major change that we made was using pop-up screens laid over existing screens in the login, account creation, and my events page. This would simplify all processes and reduce the number of screens in the user's working memory. As a result, this will streamline the user experience on our website and drive usage up.

At the end, we learned that on the desktop computer, even though there would be a lot of space, some screens, like laptop screens, are small and need simply design to get the point across to the user. Also, we learned that users won't use the application unless it's easy to understand and gets the point across clearly and concisely.

+1
